DISCHARGE SUMMARY

Name: Safwan Mondal

Patient UID: 0001

Age: 45

Admission Date: 2025-03-10

Gender: Male

Discharge Date: 2025-03-15

Address: Not Provided

Status: Discharged

Summary:

Here is the discharge summary based on the provided patient data:

CONSULTANTS INVOLVED:

Primary Consultant:

Dr. Suresh Sharma, Cardiology

Other Consultants:

Dr. Neha Patel (Neurology)

Dr. Arun Reddy (Gastroenterology)

DIAGNOSIS:

Provisional Diagnosis: Acute Myocardial Infarction

Final Diagnosis: Stable Angina

KEY FINDINGS AND CLINICAL COURSE:

Patient was admitted with chest pain, ECG abnormalities, and elevated troponins. During hospitalization, the patient received treatment with Aspirin and Nitroglycerin, and oxygen therapy was provided. Vitals remained stable, and no further chest pain was reported post-treatment. The patient was able to ambulate independently.

INVESTIGATIONS AND TREATMENT:

- * ECG
- * Cardiac Enzyme Panel
- * Aspirin 75mg daily
- * Nitroglycerin
- * Oxygen therapy

CLINICAL NOTES:

- * Vitals stable, no further chest pain post-treatment
- * Patient able to ambulate independently

SUMMARY:

During his hospitalization, Mr. Mondal received treatment for stable angina. Diagnostic studies included an ECG and Cardiac Enzyme Panel. The patient responded well to treatment, and no complications were observed throughout his stay. On the day of discharge, his vital signs were stable. Medications prescribed at discharge include Aspirin and Nitroglycerin. In conclusion, Mr. Mondal has demonstrated significant improvement and is being discharged in a stable condition.

CONDITION AT DISCHARGE:

Stable

PRESCRIPTION ON DISCHARGE:

- 1. Aspirin 75mg daily
- 2. Nitroglycerin As needed for chest pain

ADVICE:

- * Avoid strenuous physical activity for 2 weeks
- * Follow up with cardiology in 1 month
